

POOJA CHINCHANSUR

Full-Stack Developer | Web and Mobile Applications | Application Security

Bangalore, Karnataka, India | +91 7619403443 | poojachinchansur3443@gmail.com

linkedin.com/in/pooja-chinchansur-44378222a | github.com/poojapc123

PROFESSIONAL SUMMARY

Full-Stack Developer (M.Tech, Gold Medalist) with 1+ year of full-time production experience plus a year of internship experience across web, mobile, and application security. Builds and maintains a live five-application ride-hailing platform: a NestJS + MongoDB + Redis REST API serving 406 routes, two Next.js admin portals, and Flutter customer and driver apps. Strong in REST API design, role-based access control, database and query optimization, payment gateway integration, and measured performance tuning, backed by Web Application Vulnerability Assessment and Penetration Testing (VAPT) against the OWASP Top 10 and by Linux and Windows server administration. AWS Cloud Foundations certified, with working knowledge of Docker, Kubernetes, Git, and Agile SDLC. Seeking a Full-Stack Software Engineer role building secure, scalable web and mobile products.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, Dart, C++, SQL, HTML5, CSS3

Backend and APIs: Node.js, NestJS, Express, Flask, Spring Boot, REST API design, JWT authentication, role-based access control (RBAC), Mongoose ODM, WebSockets and Socket.IO, MVC architecture, API performance tuning and caching, Swagger and OpenAPI, Postman

Frontend: React, Next.js 13, Ant Design, Bootstrap, SCSS, responsive design, server-side rendering, Google Maps JavaScript API

Mobile Development: Flutter, Dart, GetX state management, cross-platform Android and iOS development, REST API integration, Firebase Cloud Messaging, push notifications, multi-language localization, Figma design-to-code implementation

Databases and Caching: MongoDB, MySQL, Redis, database design, schema and index design, aggregation pipelines, stored procedures, SQL and NoSQL query optimization

Cloud, DevOps, and Servers: AWS (Cloud Foundations), Docker, Kubernetes, Nginx, Apache, PM2, Linux and Windows Server administration, CI/CD with Bitbucket Pipelines, server hardening, backups, monitoring

Integrations: payment gateway integration with Razorpay, Stripe, and Cashfree; Firebase, Twilio, MSG91, Google Maps Platform, SMTP and transactional email

Application Security: VAPT, OWASP Top 10, SQL Injection, XSS, CSRF, broken authentication, secure code review, rate limiting, security headers, secrets management, TLS/SSL, PKI; Burp Suite, OWASP ZAP, Kali Linux, Nmap, Nessus, Nikto, Metasploit, OpenSSL, Splunk (SIEM), Wireshark, Autopsy, FTK Imager

Tools and Methods: Git, GitHub, Bitbucket, VS Code, Postman, Figma, Power BI, Object-Oriented Programming, Secure Software Development Lifecycle (SSDLC), Agile and Scrum, unit testing

PROFESSIONAL EXPERIENCE

1 US - Full-Stack Developer (Web and Mobile Applications)

Bangalore, India | Jul 2026 - Present

Deliver features end to end across a production ride-hailing platform of five deployed applications on one backend: a NestJS API (406 HTTP routes, 44 modules, 60 MongoDB models), two Next.js portals, and Flutter customer and driver apps.

- Build backend features in NestJS and TypeScript, including a notifications module with list, mark-read, and delete endpoints and a location-aware home services API powering the customer app's service tiles, ETAs, and offer badges.
- Rebuild core Flutter customer-app screens - home, login, OTP verification, splash, services, and notifications - with GetX controllers and bindings, reusable widgets, and a shared bottom navigation built from Figma design tokens; extended localization to 10 Indian languages so every new screen ships fully translated.
- Cut API and dashboard response times in a measured performance pass: headless-browser pooling took PDF invoice rendering from 2.94s to 614ms (4.8x faster), gzip compression reduced the admin bookings payload from 10,503 to 779 bytes (92.6% smaller), and exchange-rate caching removed 9 live third-party calls per request cycle, including one on every customer fare quote.
- Harden reliability by adding timeouts to all 26 previously unbounded outbound HTTP calls, configuring the MongoDB connection pool and socket timeout to prevent connection exhaustion, and adding last-known-good fallbacks so fare quoting continues when providers are down.
- Deliver an API security baseline: Helmet security headers, rate limiting on OTP, login, and password-reset routes, migration of a hard-coded JWT signing secret into environment configuration, and an audit of all 406 endpoints that closed unguarded routes including an exposed database-backup endpoint.
- Design a business-facing staff audit trail as a global NestJS interceptor capturing the record changed, the fields changed, and their before and after values with CSV export, and implement granular section-scoped role-based access control across API controllers and the admin panel's staff-permissions screen without breaking access for any live staff account.
- Diagnose and fix silent production defects - a cache-poisoning bug that reset GST to zero on fare quotes, a missing route that made every admin profile save fail invisibly, and a self-service edit that stripped the user's own permissions - and introduce version control plus 25 technical documents covering architecture, API and database design, security, and deployment.

Gundal Business Private Limited - System Administrator (Full-Stack Web Developer Responsibilities)

Bangalore, India | Sep 2025 - Apr 2026

Appointed as System Administrator and given full-stack web development ownership alongside administration duties, acting as sole developer and administrator for the company's web systems.

- Developed and maintained the company's production website (gundal.in) end to end, building responsive interfaces in HTML5, CSS3, JavaScript, and Bootstrap wired to Python (Flask) backend services.
- Designed and implemented RESTful APIs in Flask covering GET and POST operations, with request validation, structured error handling, and JSON responses consumed directly by front-end components.
- Contributed as a core developer on the Matrix internal business application, owning assigned modules from requirement analysis through development, testing, and release.
- Administered and secured servers, systems, and databases - OS and package patching, scheduled backups with restore testing, uptime monitoring, role-based access policies, least-privilege permissions, and documented server-hardening baselines.
- Optimized server-side logic and SQL queries by removing redundant calls and adding indexes, and managed user accounts, workstation setup, network access, and staff technical support as the single point of escalation.

C-DAC (Centre for Development of Advanced Computing) - Cybersecurity Intern

Bangalore, India | Sep 2024 - Feb 2025

- Performed end-to-end Web Application Vulnerability Assessment and Penetration Testing using Kali Linux, Burp Suite, OWASP ZAP, Nmap, Nessus, and Nikto.
- Identified, exploited, and documented OWASP Top 10 vulnerabilities including SQL Injection, XSS, CSRF, and authentication flaws; delivered remediation guidance to developers and retested fixes through to closure.
- Monitored security events in Splunk and OSSIM, ran digital forensic investigations with Autopsy, FTK Imager, and Wireshark, applied cryptography with OpenSSL and PKI certificates via XCA and Keytool, and produced assessment reports with severity ratings, business impact, and prioritized remediation.

Kalvium - Software Engineering Intern (Pre-Joining Learning Program)

Remote | Mar 2025 - Jun 2025

- Completed an intensive engineering program in frontend web development, Object-Oriented Programming, and DBMS, earning top proficiency levels - 4 belts in Java, 4 in Python, 3 in C++ - and defending coding assignments in mentor-led technical assessments.

Edubridge Learning Pvt Ltd - Java Full-Stack Developer Intern

Remote, Part-Time | Mar 2024 - Sep 2024

- Developed full-stack web applications with HTML, CSS, and JavaScript front ends backed by Java and Spring Boot services following MVC architecture.
- Built and consumed RESTful APIs validated with Postman, persisted data in MySQL, implemented login, session handling, and role-based access control, and tuned SQL queries to improve response times.

VK REVER - Power BI and Data Analytics Intern

Remote, Part-Time | Jan 2024 - Aug 2024

- Built an interactive Twitter analytics dashboard in Power BI surfacing impressions, engagement by country, and top-performing content, applying data cleaning, modeling, and visualization design.

PROJECTS

Ride-Hailing and Logistics Platform - NestJS, TypeScript, MongoDB, Redis, Next.js, Flutter, Dart

Rides, parcel delivery, intercity, hourly, and daily rentals: distance-slab fare calculation with manual override, geofenced service areas, driver dispatch, WebSocket live tracking, multi-gateway payments (Razorpay, Stripe, Cashfree), staff audit logging, granular RBAC, and the Flutter customer and driver apps.

Corporate Web Platform - gundal.in - Python, Flask, JavaScript, Bootstrap, MySQL

Company website and Flask REST backend covering responsive UI, API design, database schema, deployment, and post-launch server administration and hardening.

EDUCATION

M.Tech, Computer Science and Engineering - Sharnbasva University, Kalaburagi | 2022 - 2024 | Gold Medalist

B.Tech, Computer Science and Engineering - Sharnbasva University, Kalaburagi | 2019 - 2022 | 5th Rank

CERTIFICATIONS

- Advanced Certificate Course in Cyber Security (HPC), C-DAC Bangalore - 2025
- Java Full Stack Developer, Edubridge Learning with Capgemini (Spring Boot, AWS) - 2024
- AWS Academy Graduate, AWS Academy Cloud Foundations - 2021
- Data Analysis Using Microsoft Power BI - 2024
- LEAP 5.0 Internship Program: Python, AWS, Docker, Kubernetes - 2022

LANGUAGES

English, Hindi, Kannada (fluent); Telugu, Marathi, Tamil (conversational)
